

Line filter 1- phase

All-purpose filter to Protection class I

Conform to EN133200, UL1283, IEC60950

Abstract:

These filters are generally used as protection against interference voltages from power supply, and are mounted inside the control rack as close as possible to the supply voltage input. At the same time possible interference generated from the amplifiers are strongly attenuated and therefore will not reach other equipment on the same DC-supply rail.
